SAVE MONEY, REDUCE WASTE & IMPROVE QUALITY.

Embracing and incorporating Lean improvement principles is a must for business success in the 21st century. Do you know how much waste your organization produces? Do you have a large inventory of unsold stock?

Waste happens and it can cost both you, and your customers, money and time. Understanding the solutions Lean Manufacturing can provide, allows businesses to thrive and grow. These Lean principles, although different, have the same goal: the elimination of all non-value-adding activities and waste from the business.

Join MMTC, in partnership with Lake Michigan College and Kinexus, for an introduction to the five fundamental principles of Lean:

- 8 Wastes
- 5S/Visual Workplace
- Total Productive Maintenance (TPM)
- Pull Systems/Kanban
- Cellular Manufacturing
